INSTRUCTIONS TO CANDIDATES

Write your name, centre number and candidate number in the spaces provided on the answer booklet provided.

Answer **both** questions.

Write your answers on the separate answer booklet provided.

If you use more than one booklet, fasten them together.

INFORMATION FOR CANDIDATES

The number of marks for each question is given in brackets [].

This question paper consists of 4 printed pages.

1 Read the following text and answer the questions that follow.

Horticulture output set to double

Zimbabwe expects to double horticulture production this year, as demand from Asian markets, is expected to increase Agriculture Minister Dr Joseph Made has said.

The country is set to commence exports of flowers to China after meeting the quality standards required by the world's second largest economy.

In December, a Chinese firm, China Industrial International Group Zimbabwe (CIIG) exported a sample of roses to China for quality checks. Dr Made said the country has potential to double horticulture production, for both fresh and dried flowers, fruits and vegetables.

However, infrastructure would be a key cost driver to enhancing horticulture production and ensure it reaches its full potential in contributing to the country's gross domestic product.

"We can double up production, there are flowers we can produce in the open field or in green houses. We can also plant vegetables," said Dr Made on the sidelines of a tour of the diversified CIIG warehouses.

"We have to work hard in terms of the volumes; if we can push the volumes and quality too," he said.

In line with this, he said Government was also looking at increasing horticulture producers in the country to meet the rising demand especially from China, which has a huge market for fresh produce that Zimbabwe can capitalise on.

"That is what we want to work on, to say what is the market demand and how many farmers can we get to produce throughout the year in both summer or winter, because from what we know the Chinese market is quite big," he said.

CIIG indicated it would contract small scale farmers to increase horticulture production in the country as well as boost exports. The sector employs thousands of individuals across its value chain.

Horticulture used to be a major sub-sector with quick export returns of about \$143 million at its peak in 1999/2000.

In 2001, Zimbabwe was ranked second largest exporter of horticulture products in Africa, after Kenya and was the fifth biggest exporter into Europe. However, last year the country recorded \$54 million from exports of horticulture produce from prior year's \$49 million although the figure is still a pittance compared to countries like Kenya whose annual export earnings reached \$1,2 billion last year.

- | | | | |
|-----|------|--|-----|
| (a) | (i) | Define market demand. | [2] |
| | (ii) | Define contract farming. | [2] |
| (b) | (i) | Calculate the growth rate in Zimbabwean exports of horticulture produce. | [2] |
| | (ii) | Explain any two possible reasons for an anticipated increase in demand for horticulture produce from the Asian markets. | [4] |

- (c) Comment on any other measures that can be used by the government to promote horticulture production. [4]
- (d) Discuss the benefits of the primary sector to the economy. [6]

- 2 Read the passage below and answer the questions that follow:

Devolution funds boost Matabeleland South Rural Councils

Rural District Councils in Matabeleland South have so far received \$210 million. Government continues to capacitate councils with devolution funds for improved service delivery. The Government has allocated \$10 billion to the province's rural district councils.

Devolution funds have an seen upgrade and creation of social amenities and infrastructure. The funds have also assisted local authorities to fulfil their obligation of ensuring improved access to social amenities through development of key infrastructure such as clinics, classroom blocks, roads, bridges and street lighting among others.

Schools have been built in several communities thereby reducing distances walked by learners and reducing drop out cases because of distances. Clinics too have been built in areas where communities were struggling to access health care services. Councils have also managed to buy service vehicles and capacitate their staff with equipment which help to improve service delivery.

On behalf of all rural councils, Gwanda Rural District Council Chief Executive Officer Mr Sibanda said councils managed to resume projects which they had abandoned. He said "In Gwanda we recently managed to complete the Mandihongola Clinic which will be commissioned soon." He said they managed to complete Garanyemba Clinic awaiting Mother Shelter, Mashaba Clinic awaiting mothers shelter and also resumed construction of Maimuni High School girls hostel.

Construction of Tshanyaungwe Clinic in Gwanda is a result of devolution funds and this improves villagers' access to health services as they have been walking more than 10 km to the nearest health facility. In Matobo, devolution funds have been used to construct Mlugulu and Nhlupho Clinic which had stalled for many years.

In Insiza District, Bekezela Primary School was built to decongest Filabusi Primary School. The funds have also been used to rehabilitate and school and clinics in the province. Devolution programme is one of the key pillars under the National Development Strategy, (NDS) which is the country's first five year medium term plan aimed at realising the country's vision 2030 while simultaneously addressing the global aspirations of the Sustainable Development Goals (SDGs) and African Agenda 2063. NDS1 ensures accelerated inclusive and sustainable economic growth as well as an upper middle income society by 2030.
